

Web Developer to Innovate on the Future of Commerce

Job Description:

How would you like to tell your car what you want for lunch and have it ready when you arrive? How would you like to tell Google to pay for your gas so you don't risk having your credit card skimmed? We're helping answer those questions through innovation. How would you like to connect communities one by one to build the largest network of small business merchants in the mobile rewards marketplace? We're bringing an exciting new financial service designed exclusively for community banks and credit unions.

Sionic is a leading provider of connected and mobile commerce services. Community financial institutions partner with Sionic to offer digital payments and rewards solutions that reach millions of consumers. Banks and credit unions may enhance their mobile banking applications with our SDK to give customers the ability to pay for purchases and earn rewards at big and small merchants in their community and across the country.

We are also developing ULink™, the first universal linking service securely connecting consumers' preferred digital payments with their favorite merchants. We're helping make it easier than ever for restaurants, gas stations, parking providers, and hotels to accept orders and payments from millions of consumers actively searching, using popular mobile apps like Google, Chrome, Maps, and Assistant.

As a Web Developer, you'll be working alongside our development team, contractors and global, industry-leading partners to help deliver new and higher sales for retail, restaurant and manufacturing clients. You will help design and develop exciting new web experiences for enterprise merchants integrating with our ULink platform. You will also have the opportunity to redesign our merchant facing portal that supports our Mobile Rewards Marketplace. We will work collaboratively as a team, with daily stand-ups and cross functional reviews. You'll have personal ownership of your work and we'll be relying on your ability to solve complex problems. Not only will you be learning new technologies, but also we'll need you to push the envelope of what's possible with that technology!

Team:

We provide opportunities for developers to collaborate, learn from each other and take the lead on development projects and company initiatives. We foster a positive environment of diversity, teamwork and innovation that comes from information sharing and knowledge across all departments, teams and experience levels. We encourage

critical thinking and challenge team members to look beyond, and consider not just what can be done today, but what's possible in the future. Your success is our success, and we grow and innovate together.

Skills & Requirements:

- We're hiring team members who are disciplined, passionate and excited to work in a relaxed environment
- We're a small, diverse company and it's really important that you mesh well in our family-like culture.
- Strong communication skills and the ability to deal with partners in everyday and technical terms
- Be highly motivated and maintain a positive, flexible, "can-do" attitude
- Recent experience using web technologies: HTML, Javascript, CSS (SCSS) & React
- Experience in server-side programming languages including Java and Ruby.
- Expertise in integrating and developing APIs and JSON calls is needed.
- Experience with cloud platforms
- Experience with Linux, GIT & Go a plus
- Aptitude and desire to learn new technologies
- Self starter who can work independently

Company:

Based in Midtown, Atlanta, GA, Sionic is a privately held company founded in 2010. Our small staff and family-style atmosphere provides an enjoyable environment. Our pioneering spirit allows us to be dynamic and work closely together to solve problems by leveraging new technologies. We encourage creativity, accountability and teamwork in a comfortable atmosphere.

We all have lives, so it's important that you know you're taken care of. We offer these awesome benefits especially for you:

- Flexible Schedules (based on need)
- Paid Time Off
- Work from Home Provisions (approval required)
- Ability to Work with Innovative Technology and Tech Partners
- Opportunity to Work with and Learn from Other Developers
- Flexible Family Leave
- Weekly Employee Lunches
- Weekly Employee Happy Hours
- Monthly Coworker Birthday Celebrations
- Free Beverages at Office
